Timber Shutters & Grilles

‘Nothing beats the aesthetic appeal of real wood’
Timber Shutters & Grilles

'Nothing beats the aesthetic appeal of real wood'

Experience
Syston Doors have been manufacturing timber rolling shutters & grilles for over sixty years and provide the largest range available. Every shutter is backed by years of experience to ensure total quality.

Applications
Designed for use in bars, reception counters, display areas, serveries, homes, cupboards, etc.

Ironmongery and Locking
On manually operated shutters & grilles we include flush lifts in brass with the option of other finishes.

Locking is by shootbolts on shutters.
An option for cylinder lock to the bottom rail is available. This throws a lock bar into each side guide and not the counter top/floor.
A cylinder lock is included as standard on 'T9134' grilles.
Locks would normally be omitted if electrically operated.

Operation
Self coiling (manual push up/pull down) operation by counter balanced sprung roller is standard up to 3000mm wide x 2100mm high.

Electric operation by single-phase 240v 'tubular motor' with activation by rocker switch or keyswitch, with or without manual handcrank override, is available as an option.

N.B. Consideration should be made as to the user of the shutter. If the user is less able we recommend the shutter be split into two parts or be electric if over 2500mm wide.
Specifications
For maximum versatility we manufacture our timber shutters in four attractive styles.

- Our 'T134' (25mm lath) is available in Ramin, White Beech, White Oak, Red Oak, Utile (Mahogany), White Ash, Maple and Red Cherry as standard.

- Our 'T234' (50mm lath) is available in Ramin, White Oak, Red Oak, Utile (Mahogany), White Ash, Maple, Red Cherry and Colombian Pine as standard.

N.B. 'T234' moulding is not available in White Beech and will not 'reverse roll'.

- Our 'T244' uses a timber lath in Ramin, White Oak, Red Oak, Utile (Mahogany), White Ash, Maple, Red Cherry and Colombian Pine with an insert of either grey, black or blue plastic, stainless steel or aluminium. (Other insert options may be possible - please consult our sales department).

Due to the nature of this 'combination' lath, this shutter will always be supplied with a polished or stained & polished finish to suit your own requirement.

- Our 'T9134' rolling grille, manufactured using our 'T134' (25mm) moulding where each alternate lath is omitted for a space of 229mm x 25mm to form an attractive single spaced grille effect, or with two laths removed for double spacing of 229mm x 50mm.

Hoods, Fascias and/or Soffits
These are available at extra cost in 12mm Birch faced plywood.

Beech, Ash, White Oak or Sapele faced plywood available at extra cost.

Galvanised sheet steel hood/fascia/soffit also available with optional powder coated finish.

Finish
Our timber shutters are supplied as standard unfinished 'in the white' unless otherwise specified.

Sanded (ready for finishing 'by others'), Polished or Stained & Polished finishes are available at extra cost.

We can also offer a 'Rentokil Albi-Max' Class 1 or 0 intumescent flame retardant finish.

Custom Design
Our timber shutters and grilles are all manufactured up to 3000mm in length with the option of fixed or removable, straight or angled, intermediate guides allowing total flexibility in length of 'run' required.

Removable guides will usually be fixed into the counter or floor by use of flush fitting spring loaded retaining keeps (dustcaps).

Dependent on timber species we can manufacture our timber shutters and grilles, when electrically operated, up to 4500mm clear wide and 4500mm clear high.*

* Please contact our sales office to confirm the maximum size available in your choice of timber.

We can also provide tambour shutter curtains with or without side guides for use in cabinets, etc.

Customer to provide adequate support structure to carry imposed load weight = 20kg/m²

**Please note:** When electrically operated an additional 30mm is needed behind the back of the standard guides shown, depending on the size of the shutter.
Due to the limitations of the print process, these samples are only intended as a guide.
